DIPARTIMENTO DI INFORMATICA

Laurea Magistrale in Informatica

Hebbian Co-Design of Morphing Winged Drones

Relatore:

Prof. Andrea Cossu

Candidato:

Salvatore Mastrangelo

ANNO ACCADEMICO 2025/2026

Introduction

Related Work

Technical Background

3.1 Long-Short Term Memory Networks

3.2 Actor-Critic Reinforcement Learning

3.3 Evolutionary Algorithms

3.3.1 CMA-ES

3.3.2 NSGA-II

3.4 Hebbian Learning

Setup and Implementation

4.1 Genesis: The Simulator

4.1.1 Advantages and Disadvantages

4.1.2 Physics Simulation

4.1.3 Aerodynamics Simulation

4.2 Flight Environment

4.2.1 Uniform Forests

4.2.2 Growing Forests

4.2.3 Latin Hypercube Forests

4.3 Drone Model

4.3.1 Drone Shape and Actuators

4.3.2 Drone Genome

4.3.3 The Standard Drone

4.4 Controller Structure

4.4.1 Specialist LSTM Controller

4.4.2 Generalist LSTM Controller

4.4.3 Hebbian Controller

4.5 Training Pipeline

4.5.1 Training the Generalist LSTM Controller

4.5.2 Inner Loop: Evolving the Hebbian Rules

4.5.3 Outer Loop: Evolving the Drone Morphology

Results and Experiments

5.1 Inner Loop Experiments

5.1.1 Recovering Performances on Generalist Controllers

5.1.2 Improving Performances on Specialist Controllers

5.2 Full Co-Design Experiments

5.2.1 Co-Design VS Morphology-Only Evolution

5.2.2 Swapping the Pareto Fronts

5.2.3 PCA Analysis of the Evolved Morphologies

5.2.4 Generalization Capabilities of Evolved Controllers

5.2.5 Convergence or Adaptation?

Future Work

6.1 Meta-Learning Techniques

6.2 Testing on Real Drones

6.3 Testing on Different Systems

Conclusions

List of Figures

Ringraziamenti
